## **7. Force Majeure**

“Force Majeure Event” means circumstances, which are beyond the control and proper responsibility of the consultant. By way of illustration, the following circumstances are agreed to be properly characterized as events of “force majeure”: flood, fire, earthquake, hurricane and other acts of God; war, military actions, civil war, guerrilla or terrorist actions, including all measures limiting the free movement of foreigners and their performance of activities; failure of public utilities, such as electrical power, natural gas and water, or transportation systems; and acts by a governmental or executive body which obstruct performance by the consultant

if NTA provides written confirmation that one or more events of force majeure prevented the supervision of an implementation of the Roll out Obligation of the Licensee, then the obligations of the consultant shall be modified accordingly; provided, however, that the responsibility of the consultant for supervision of an implementation of the Roll out Obligation of the Licensee shall remain intact during the tenure of the contract, on improvement of the conditions giving rise to the event of force majeure.

**Network Roll-out Requirements for Basic Telecommunications Service:**

The roll-out requirement shall be in three phases as mentioned hereunder. Only upon the completion of preceding phase the licensee can proceed to the next phase in consecutive succession.

**B. First Phase**

The first phase shall commence from the effective date of the license and shall be completed within 15 months. This phase consists of the following works:

- a) Establish Network in the MWDR. Such Network shall consist at least of Switching Network, Transmission Network and Access Networks,
- b) Install and operate at least two telephone lines in each of the VDC(s) listed in the License,
- c) Commission the Network with the capacity to avail "On Demand" telephone services in at least 50 % of the VDC(s) and 50% of the Municipalities of the MWDR.

**C. Second Phase**

This phase shall be completed within 30 months from effective date of the license. This phase consists of the following works which can be carried out only after the NTA is satisfied that the licensee has fulfilled the Network Roll-out Requirements earmarked for First Phase.

- a) Extend its service simultaneously in the FWDR and WDR in such a way that both the VDC(s) and Municipalities are served in equal proportions in both Regions.
- b) Expand the network aimed at achieving "On Demand" telephone service availability in all the VDC(s) and Municipalities of MWDR.
- c) Expand the network to avail "On Demand" telephone services in 50% of the VDC(s) and 50% of the Municipalities of the FWDR and WDR.

For the purpose of achieving the roll-out requirement, "On Demand" availability of telephone services shall be understood to mean that the licensee shall have achieved network capability of making available telephone lines to 99% of reasonable demand within a period of two weeks, unless it is restricted by topographical or network constraints, which if applicable, the licensee shall be obliged to respond in writing to such demand, such response explaining the

constraints and specifying the time period and other conditions which could overcome to meet the demand.

If one or more events of force majeure prevented the installation, activation or operation of some of the access lines required under Roll out Obligation, then the Network Roll out Obligation shall be modified accordingly; provided, however, that the responsibility of the operator for the installation, activation and operation of the telephone lines shall remain intact during the tenure of the licence, on improvement of the conditions giving rise to the event of force majeure.

**"Activation of a telephone line"** – For the purpose of these roll-out requirements, a telephone line shall be considered to be activated when NTA verifies that :

- incoming and outgoing local, domestic long distance (STD) and international (ISD) service can be obtained from the line/PCO(s); and
- The Quality of Service criteria for call completion identified in Annex-2 below is satisfied.

### Definitions of QoS parameters

- (a) **Network Performance:** Network Performance is the most important QoS parameter for measurement of quality of a Telecom Operator. Poor performance of a telecom network would induce customer complaints and faults, thereby leading to customer dissatisfaction towards the operator. The Network Performance parameter is further subdivided into the following:
- (i) **Service Access Delay:** Service Access Delay is defined as “the time between the last dialed digit and getting the ring back tone”.
  - (ii) **Call Completion Ratio:** Call Completion Ratio (CCR) is defined as “the ratio of number of completed calls to the number of call attempts”.
  - (iii) **Grade of Service:** Grade of Service (GoS) is defined as “the probability of call failure over the junctions between switches due to non availability of junctions”.
  - (iv) **Point of Interconnection (PoI) congestion:** PoI congestion is defined as “the ratio of calls failed over the PoI (between two operators/ licensees)”.

due to unavailability of free circuits to the total call requests for seizure of Pol circuit”.

**Note:** It is to be noted that all the measurements of performance parameters should be carried out during the “Time Consistent Busy Hour (TCBH)”. TCBH is defined as “the one hour period starting at the same time each day for which the average traffic of resource group is greatest over the days under consideration”. ITU recommends analysis of 90 days to establish TCBH. Further, the above parameters are to be measured by the operators within their own network (within a single exchange in case of wire line networks). In view of the variety of different systems in use at the different exchanges, it has determined that for the present time, measurements of all the parameters for the wire line networks shall be limited to the Parent Exchanges alone.

Established calls means the following events have happened in call set up: Call attempt is made within the service area and call is routed to the onwards path from the concern switch (MSC in case of wireless networks).

- (iii) **Call Drop Ratio:** Call Drop Ratio is defined as “the ratio of calls lost after establishment to all established calls”. This includes calls dropped due to failure of handover, radio loss and network congestion.
- (iv) **Point of Interconnection (Pol) congestion:** Pol congestion is defined as “the ratio of calls failed over the Pol (between two operators/ licensees) due to unavailability of free circuits to the total call requests for seizure of Pol circuit”.
